c/o Crown Oil Ltd — RTFO obligated supplier (intermediary)

Subject: Pre-application Track A submission — RTFO RCF pathway, production period January 2025

Dear Sir or Madam,

On behalf of **OisteBio GmbH** (Swiss GmbH, MWSt CHE-234.625.162), operator of the pyrolysis facility located in Girardot (Cundinamarca, Colombia), we hereby submit the present Pre-application bundle under the Renewable Transport Fuel Obligation (RTFO) Track A process, in respect of the Recycled Carbon Fuel (RCF) pathway. The submission covers production volumes of **DEV-P100 refined pyrolysis oil** derived from **End-of-Life Tyres (ELT)** (end-of-life tyre material), processed during the **RTFO obligation year 2024/2025** reporting period (production period January 2025). The feedstock is sourced exclusively from post-consumer waste tyres and is classified as RCF under the UK RTFO Guidance, Chapter 9.

The off-taker for the volumes covered by this submission is **Crown Oil Ltd (United Kingdom)**, which acts as the UK obligated supplier and will subsequently claim Renewable Transport Fuel Certificates (RTFCs) against the RCF volumes evidenced herein. Crown Oil Ltd is the sole UK buyer of the OisteBio DEV-P100 product; no European intermediaries are involved in the chain of custody for the period covered by this bundle.

Enclosed with this letter you will find the evidence pack listed in the Evidence Index (Annex `09_evidence_index_v0.pdf`), which cross-references every document to the specific DfT rejection point it addresses. The bundle is cryptographically anchored via `MANIFEST.sha256` at the root of the bundle directory; every individual artifact carries its own SHA-256 side-car.

- **Annex A — Mass Balance report** (signed), period January 2025, with full daily detail and supplier breakdown;
- **ROS export** — Renewable Obligation Sustainability return draft, period RTFO obligation year 2024/2025;
- **Supplier evidence pack** — ISCC EU certificates, supply contracts, eRSV registry extracts, and Self-Declarations ≤ 5 tonnes;
- **Compliance pack** — ISCC EU PoS (status pending — see Outstanding Items §1), RTFO pathway declaration, supply-chain diagram;
- **Audit trail** — cryptographic database snapshots and audit-log CSV;
- **Annex D — Closing Stock Carry-over Declaration**, declaring the 339.865 kg physically retained at the Girardot facility at month-end.

The compliance basis for this submission rests on (i) ISCC EU certification of the chain of custody from waste-tyre collection through pyrolysis to the finished DEV-P100 refined pyrolysis oil product, ensuring traceability and mass-balance integrity in accordance with ISCC EU System Document 203, and (ii) the UK RTFO RCF eligibility criteria as set out in the RTFO Guidance Part One (Process Guidance) and Part Two (Carbon and Sustainability).

Outstanding items

The following three items are formally disclosed as residual gaps at the time of submission. Each item is documented in the bundle with its current status and Crown Oil / OisteBio commitments for post-acceptance closure.

1. **Retrospective ISCC EU Proofs of Sustainability for January 2025 inputs.** A formal request was submitted to the ISCC-accredited certifier in Colombia on Day 1 (15 May 2026); the response is currently pending. Status documented in Annex `03_iscc_pos_status.pdf`. Crown Oil and OisteBio commit to forwarding the PoS chain to the Unit within 30 days of bundle acceptance, or to documenting refusal and engaging the fallback evidence procedure.
2. **Feedstock provider regulatory authorisations (Colombia).** Spanish-language copies of ANLA / Ministerio de Ambiente permits for the three principal feedstock providers are included in folder `04_feedstock_provider_authorisations/`. Consular legalisation (UK consulate, Bogotá) and sworn EN translations are in progress; ETA TBD. Legalised originals will be transmitted within 30 days of bundle acceptance.
3. **Closing stock of 339.865 kg retained at Girardot.** The closing inventory for January 2025 is physically retained at the OisteBio Girardot facility, awaiting downstream allocation. Composition (17 K-only rows from the JANUARY2025 production workbook) is documented in `07_stock_carryover_explanation.pdf` (Annex D). This carry-over fully accounts for the closure delta in the Annex A mass balance and is not a defect.

We kindly request the Low Carbon Fuels Delivery Unit to acknowledge receipt of the present bundle and to confirm next procedural steps, including any clarification requests, additional evidence to be supplied, or scheduling of a technical pre-application meeting. Crown Oil Ltd, as obligated supplier, also offers to engage an independent ISCC verifier (Bureau Veritas Colombia / SGS Colombia) for a pre-audit of the January 2025 evidence pack, on request from the Unit. We remain at your full disposal for any further information that may be required.

Yours faithfully,

For and on behalf of OisteBio GmbH
