-

1. What this platform is

This platform is the mass-balance and chain-of-custody record system for the End-of-Life Tyres (ELT) feedstock stream processed at the OISTEBIO Girardot facility and for the certified pyrolysis-oil product fractions derived from it. It is operated under the ISCC certification system (ISCC EU and ISCC PLUS), using the **mass-balance** chain-of-custody methodology.

The platform lets you, as a reviewing officer, **consult and verify** — without altering anything — the complete operational and documentary record:

- the **daily quantities of feedstock received** (truck-by-truck), with supplier, weight, and the linked electronic receipt (eRSV);
- the **daily production** figures, expressed in both kilograms and litres;
- the **mass balance** of input versus output, by day and by month, with the daily **closure** percentage that measures how well input and output reconcile;
- the **breakdown of inputs by supplier**;
- the **master data**: suppliers, ISCC certificates (with their validity dates and download links), and supply contracts;
- and the underlying **documents**: eRSV receipts, weighbridge tickets, and signed contract PDFs.

Everything is designed so that the chain of custody — from feedstock reception to final product delivery to the UK customer — can be reconstructed and cross-checked at any point.

2. Your access level (read-only)

You are signed in with a **Viewer** account. This level is deliberately limited to consultation:

You can	You cannot
Open and read every operational and master-data page	Create, edit, or delete any record
Open document viewers (eRSV, ticket, contract PDF)	Change suppliers, certificates, or contracts
Filter, search, and sort tables	Access user management
Export reports to CSV	Access the audit log / administrative tools
Download eRSV and contract PDFs	—

The administrative sections (user management and audit log) are **not shown** in your menu and are blocked even if reached by direct link. This guarantees that nothing in the certified record can be changed during your review.

3. Signing in

1. Open <https://oistebio.usenexos.com> in any modern browser (Chrome, Edge, Firefox, Safari). You will be taken to the sign-in screen.
2. The screen shows the heading **DFT** and the note *"Mass balance — operator access"*.
3. Enter the **Email** and **Password** that were supplied to you by e-mail.
 - The e-mail field is **not** case-sensitive — upper- or lower-case makes no difference.
4. Click **Sign in**. The button briefly shows *"Verifying..."*.
5. On success you arrive at the **Dashboard**.

Session length: your session lasts **8 hours**, after which you simply sign in again. The login uses a secure, http-only session cookie — there is nothing to install or configure.

If you see *"Invalid credentials"*, re-check the password (it is exact/case-sensitive). If you see *"Session expired · sign in again"*, your 8-hour window has elapsed — sign in once more.

4. The screen layout

Every page shares the same frame:

- **Left sidebar** — the navigation menu, grouped into sections:
 - **(top)** Dashboard
 - **Operations** — Daily inputs · Daily production
 - **Reports** — Mass balance · By supplier · Daily closure
 - **Master data** — Suppliers · Certificates · Contracts
- **Top bar** — a breadcrumb (shows where you are) on the left, and your account menu on the right (shows your e-mail and the role **viewer**; this is where you sign out).
- **Main area** — the content of the current page.

On a phone or narrow window the sidebar collapses into a **menu button** (≡) at the top-left; tap it to open the navigation.

The **Users** and **Audit log** entries are intentionally absent from your menu — that is expected for a Viewer account.

5. Dashboard

Menu: Dashboard · **URL:** /app

The Dashboard is your landing page and a 30-day summary of the operation. It is the quickest way to gauge overall health before drilling into detail.

The four KPI tiles (last 30 days):

Tile	Meaning
Total input	Sum of all feedstock received, in kilograms.
Total output	Sum of all product/output, in kilograms.
Avg closure	The average daily closure percentage (how closely input and output reconcile). The hint shows how many days had closure data.
Closure alerts	The number of days flagged as alert (closure gap greater than 5%). If this is above zero it turns red — those days warrant a closer look.

Input vs output trend — a sparkline chart plotting input (solid line) against output (dashed line), one point per day for the last 30 days. It lets you see at a glance whether input and output track each other.

If the backend is briefly unreachable you may see *"Backend unreachable · partial data"* — refresh the page.

6. Daily Inputs

Menu: Operations → Daily inputs · **URL:** `/app/inputs`

This page lists **every individual feedstock delivery** (each truck/vehicle entry), most recent first. It is the granular reception ledger.

Filters (top of page):

- **From / To** — date range pickers.
- **Supplier** — drop-down listing every supplier as *code · name*; choose **All** for no filter.
- **Apply** to run the filter, **Reset** to clear it.

Table columns:

Column	Meaning
Date	Delivery date.
Time	Delivery time (or –).
Supplier	Supplier <i>code</i> · <i>name</i> .
eRSV	The electronic receipt number — click it to open the eRSV document (see §14). – if none.
TICKET	Click ticket to open the weighbridge ticket (see §14).
Car	Weight received as car tyres (kg).
Truck	Weight received as truck tyres (kg).
Special	Weight received as special/other category (kg).
Total kg	Total net weight of the delivery (bold).
Open	The → arrow opens the full detail of that single delivery.

Note on volume: the list shows the first 50 rows; narrow the date or supplier filter to see a specific window in full. The page header summarises the count, total kilograms, and date range currently displayed.

7. Daily Production

Menu: Operations → Daily production · **URL:** /app/production

This page lists production **by day**: how much feedstock was fed into the process and how much product came out, by fraction.

Filters: **From** / **To** date pickers, **Apply**, **Reset**.

Table columns:

Column	Meaning
Date	Production day.
Input kg	Feedstock sent to production that day.
EU prod	EU-certified light fraction produced (kg) — the DEV-P100 product.
Plus	PLUS heavy fraction produced (kg) — the DEV-P200 product.
Output EU	EU output (kg), bold.
Contract	The contract reference the production is allocated to (or –).
Open	The → arrow opens the full production-day detail.

The header summarises total input, total EU output, and the date range shown.

8. Mass Balance report

Menu: Reports → Mass balance · **URL:** `/app/reports/mass-balance`

This is the central reconciliation report: **input versus output**, viewable **by day** or **by month**, with full breakdowns. This is where the mass-balance methodology becomes visible and auditable.

View toggle: **Daily** / **Monthly** (top of page).

Filters & controls:

- A **quick month picker** for jumping to a month.
- **From** / **To** date pickers.
- **Supplier** drop-down (**All suppliers** by default).
- **Filter** to apply, **Reset** to clear (keeps the daily/monthly view).
- **Export CSV** — downloads the current report as a spreadsheet file.

The six KPI tiles:

Tile	Meaning
Period	Number of days (or months) in view.
Total input	Total feedstock received (kg).
Total output	Total output (kg).
Total EU (L)	Total EU product, in litres .
Total Plus (L)	Total PLUS product, in litres.
Total prod (L)	EU + PLUS combined, in litres.

Litres are derived from kilograms by **density-variable conversion** (the conversion factor depends on the density of the specific stream rather than a fixed coefficient), which is why both mass and volume are reported.

Daily view

Each day is an **expandable row**. The header line shows **Day, Input, Output total**, and **Closure %** (the closure turns **red** when the gap exceeds 5%). Click a row (the > arrow) to expand it.

When expanded you see:

- **Production breakdown** (kg): *Kg → production · EU prod · Plus prod · Output EU · Carbon black · Metal scrap · H2O · Syngas · Losses* — i.e. every output and co-product stream, so the entire converted mass is accounted for.
- **Volume (litres)**: *EU prod (L) · Plus prod (L) · Total prod (L)*.
- **Truck entries** — a nested table of that day's individual deliveries with columns: **Time · Supplier · Cert / Contract** (certificate number and contract code) · **eRSV · TICKET · C14** (the radiocarbon biogenic analysis reference and value %) · **Loaded** (vehicle-type badges with kg) · **Total kg · Veg % (T / M)** (theoretical / manufacturing biogenic percentage).

The **eRSV** and **TICKET** links here open the same document viewers as on the Daily Inputs page.

Monthly view

Each month is an expandable row showing **Month, Input, Output total, Closure %**. Expanding it shows the same Production-breakdown and Volume tiles aggregated for the month.

9. By Supplier report

Menu: Reports → By supplier · **URL:** `/app/reports/by-supplier`

This report shows **how the feedstock input is distributed across suppliers**. By default it opens on the **RTFO audit window (1 January - 31 August 2025)**.

Filters:

- **From / To** date pickers, **Filter** to apply.
- **Reset to audit window** — returns to 1 Jan - 31 Aug 2025.
- **Full period** — the same Jan-Aug 2025 range with all aggregate / Jan-only suppliers included (scope = all).
- **Export CSV**.

KPI tiles: **Suppliers** (count) · **Total input** (kg) · **Total entries** (number of deliveries).

Pie chart: *Input share by supplier* — a visual of each supplier's proportion.

Table columns: **#** (rank) · **Code** · **Name** · **Input kg** · **% Total** · **Entries** (deliveries) · **Days** (distinct delivery days). The final **bold** row totals everything and shows **100.0%**.

A footnote on the page explains the default audit window and how aggregate suppliers are handled.

10. Daily Closure report

Menu: Reports → Daily closure · **URL:** `/app/reports/closure-status`

This is the **traffic-light** view of daily reconciliation. The "closure" is the percentage difference between input and output for a day; small is good.

Filters: **From / To**, **Filter**, **Reset**, **Export CSV**.

The five status buckets (each a clickable tile showing a count and percentage — click to filter the table to that bucket):

Bucket	Colour	Definition
OK	dark olive	closure gap $\leq$ 2%
Warn	light olive	gap between 2% and 5%
Alert	red	gap greater than 5%
No input	grey	no feedstock recorded that day
No output	grey	no output recorded that day

Table columns: Day • Status (coloured dot + label) • Input kg • Output kg • Closure % (coloured red on alert, olive on warn). Each row carries a colour bar on its left edge matching its bucket.

Use this report to spot, and then investigate, any day whose input and output do not reconcile within tolerance. (Note: some apparent gaps in early 2025 are explained by legitimate stock carry-over between months rather than data errors.)

11. Suppliers (master data)

Menu: Master data → Suppliers • **URL:** `/app/suppliers`

The supplier register.

Toggle: Active (default) / All. **Search** box accepts code, name, or country.

KPI tiles: Suppliers (total) • Active • Aggregates (suppliers that represent a grouped/aggregate source).

Table columns: Code • Name • Country • Type (*aggregate* or *single*) • Status (active / inactive badge) • Notes • Open (→ to the supplier detail).

12. Certificates (master data)

Menu: Master data → Certificates • **URL:** `/app/certificates`

The register of ISCC and other compliance certificates, with validity dates and **download links to the issuing authority**.

Status tabs: **All** · **Active** · **Expired** · **Revoked** · **Placeholder**, plus an *Active only / All (with deleted)* switch. **Search** accepts number, scheme, or notes.

KPI tiles: **Total** · **Active** · **Expired** · **Placeholder** · **Expiring ≤60d** (the last turns **red** if any active certificate expires within 60 days — a renewal-watch indicator).

Table columns:

Column	Meaning
Number	The certificate number. For ISCC certificates this is a clickable link (↗) that opens the official certificate document on the ISCC system (or the direct issuer download).
Scheme	e.g. <i>ISCC EU</i> , <i>ISCC PLUS</i> .
Status	Active / expired / revoked / placeholder badge.
Issued	Issue date.
Expires	Expiry date.
Suppliers	How many suppliers are linked to this certificate.
Notes	Free-text note (hover for the full text).
Open	→ to the certificate detail.

This page lets you confirm, for any supplier in the chain, that a **valid ISCC Proof of Sustainability / certificate** exists and is in date, and to open the source document directly.

13. Contracts (master data)

Menu: Master data → Contracts · **URL:** `/app/contracts`

The register of supply contracts and committed volumes.

Toggle: **Active** / **All**. **Supplier** drop-down filter, **Filter**, **Reset**.

KPI tiles: **Contracts** (total) · **Placeholder** (count of placeholder contracts) · **Total volume** (sum of committed kg).

Table columns: **Code** (clickable — opens the contract PDF viewer, see §14) • **Supplier** • **Start** • **End** • **Volume kg** • **Type** (*placeholder / real*) • **Status** • **Open** (→ to detail).

14. Document viewers

Three pop-up viewers let you inspect the underlying evidence without leaving the page. Each opens over the current screen and closes with **Close** or the **Esc** key.

eRSV viewer

Open it by: clicking an **eRSV** number in *Daily Inputs* or in the *Mass Balance* daily entries.

It shows a header (**eRSV {number}**, supplier, date, total kg, and a **regenerated** badge where applicable) and a full, faithful preview of the eRSV receipt document in the body. Use **Download PDF** to save a PDF copy. The eRSV is the originating instrument of the chain of custody for each delivery.

Ticket viewer

Open it by: clicking **ticket** in *Daily Inputs* or *Mass Balance*.

It shows the weighbridge ticket as a label/value table — **eRSV** • **Supplier** • **Prod** (LLANTAS or SPECIAL) • **Driver** • **Cédula** • **Plate** • **Transport** • **Hora ent.** / **Hora sal.** (entry/exit time) • **Peso ent.** / **Peso sal.** / **Peso neto** (gross / tare / net weight) • **Total input** • **Weigher** — followed by a monospace print-preview of the ticket exactly as it appears on the thermal printer. The driver, plate and transport details are consistent with the corresponding eRSV for the same delivery. **Stampa termica** ("thermal print") downloads the raw printer file; you will not normally need this for review.

Contract viewer

Open it by: clicking a **contract code** in *Contracts*.

It shows the contract's date range and committed volume in the header, then the **signed contract PDF** in the body (or *"Signed PDF not available"* where none has been uploaded yet). Use **Download PDF** to save it.

15. Exporting data (CSV)

The **Mass balance**, **By supplier**, and **Daily closure** reports each have an **Export CSV** button. It downloads exactly the data currently in view (respecting your filters) as a standard spreadsheet file, suitable for your own records or for further analysis in Excel. Exporting changes nothing in the system.

16. A suggested review workflow

A practical order for a compliance review:

1. **Dashboard** — read the 30-day totals and check the **Closure alerts** tile.
 2. **Daily Closure** — open the **Alert** bucket; note any days with a closure gap over 5% for investigation.
 3. **Mass Balance (daily)** — expand those days; verify the full input/output breakdown and the per-delivery entries; open the **eRSV** and **Ticket** for spot-checked deliveries.
 4. **By Supplier** — confirm the input distribution over the **RTFO audit window**; export CSV for your file.
 5. **Certificates** — for the suppliers that matter, confirm a **valid, in-date ISCC certificate** exists and open the source document via the ↗ link; watch the **Expiring ≤60d** indicator.
 6. **Contracts** — confirm a contract and committed volume exists for the relevant suppliers; open signed PDFs as needed.
 7. **Export** the reports you need as CSV and sign out from the top-right account menu.
-

17. Glossary

Term	Meaning
ELT	End-of-Life Tyres — the feedstock processed at Girardot.
eRSV	Electronic receipt of material — the per-delivery reception document and the first node of the chain of custody.
Ticket	The weighbridge ticket for a delivery (gross/tare/net weight, driver, plate).
DEV-P100	The certified EU light pyrolysis-oil fraction (the principal certified product).
DEV-P200	The PLUS heavy fraction.
Mass balance	The chain-of-custody method where certified characteristics are credited and allocated over a period, with input/output kept quantitatively equivalent.
Closure %	The percentage difference between a day's input and output; a measure of reconciliation.
C14 / Veg %	Carbon-14 radiocarbon analysis and the resulting biogenic-content percentage attributed to the product.
ISCC EU / ISCC PLUS	The certification schemes under which the chain of custody operates.
PoS	Proof of Sustainability — the certificate evidencing a batch's sustainability characteristics.
Aggregate supplier	A single register entry representing a grouped source of feedstock.

18. Frequently asked questions

Can I accidentally change or delete something? No. Your account is read-only. There are no edit or delete controls anywhere in your interface.

Why don't I see "Users" or "Audit log" in the menu? Those are administrative tools, deliberately hidden from reviewing officers. Their absence is normal and expected.

A date filter shows nothing — is that an error? Usually it means there is simply no data in that exact range. Widen the dates or use **Reset**.

The figures are in both kg and litres — which is authoritative? Both are reported. Kilograms are the measured mass; litres are derived using density-variable conversion. They are provided together so mass and volume can be cross-checked.

My session stopped working. Sessions last 8 hours. If you see *"Session expired"*, simply sign in again with the same credentials.

Who do I contact about the data itself? For questions about specific figures, certificates, or documents, contact OISTEBIO through your usual point of contact. This guide covers only how to navigate and consult the platform.
