## Executive Summary

This Annex A presents the monthly mass balance for the **July 2025** production period at the Girardot, Colombia pyrolysis facility, operated by **OisteBio GmbH**. Input feedstock is **ELT — End-of-Life Tyres**; output product is **DEV-P100 — refined pyrolysis oil**, supplied to **Crown Oil UK** under the UK DfT — LCF Delivery Unit reporting framework.

### Monthly aggregate

| Metric                      | Value                            |
|-----------------------------|----------------------------------|
| Total input (ELT)           | 3 778 672,00 kg                  |
| EU-grade product (DEV-P100) | 1 144 937,62 kg / 1 479 247,56 L |
| PLUS-grade product          | 1 510 007,72 kg / 1 733 648,35 L |
| C14 biogenic fraction       | —                                |
| Closure (output – input)    | ±0,00 kg (±0,00 %)               |

### Mass balance closure

**GREEN — within tolerance**

|closure| < 1% — passes ISCC EU mass-balance integrity threshold without remediation.

## Daily Detail — July 2025

Daily mass-balance rows, sorted by date ascending. Closure shown as output minus input. Densities applied for July 2025: EU 0,7740 kg/L, PLUS 0,8710 kg/L (per product\_densities table, migration 0014).

| Date       | Input (kg)   | EU (kg)      | PLUS (kg)    | EU (L)       | PLUS (L)     | C14 (%) | Closure (kg) |
|------------|--------------|--------------|--------------|--------------|--------------|---------|--------------|

## By-Product Streams — July 2025

Mass balance breakdown of non-DEV-P100 streams from daily\_production, summed for the reporting period. Carbon black and metal scrap are mechanically separated recovered solids; gas/syngas is the non-condensable pyrolysis vapour (process fuel + flare); H<sub>2</sub>O is recovered process water; losses captures the unaccounted mass needed to close the daily balance.

| Stream                           | Total (kg)             | Share of input |
|----------------------------------|------------------------|----------------|
| Carbon black                     | 516 610,68 kg          | 13,67 %        |
| Metal scrap                      | 317 049,46 kg          | 8,39 %         |
| Gas / syngas                     | 160 211,17 kg          | 4,24 %         |
| H <sub>2</sub> O (process water) | 57 338,73 kg           | 1,52 %         |
| Losses (unaccounted)             | 72 516,62 kg           | 1,92 %         |
| <b>Total by-product mass</b>     | <b>1 123 726,67 kg</b> | <b>29,74 %</b> |

## Supplier Breakdown — ELT Feedstock

Distribution of inbound feedstock by ISCC EU certified supplier. Shares computed as supplier total divided by aggregate monthly input.

| Supplier            | ISCC EU ref.    | Total (kg)   | Share    | Proportion             |
|---------------------|-----------------|--------------|----------|------------------------|
| KAL TIRE            | US201-138762025 | 1 092 526,00 | 28,91 %  | <div><div></div></div> |
| EFFICIEN TECHNOLOGY | US201-158772025 | 1 031 819,00 | 27,31 %  | <div><div></div></div> |
| PYRCOM SAS          | ES216-20249051  | 692 867,00   | 18,34 %  | <div><div></div></div> |
| ≤5 TON              | —               | 427 307,00   | 11,31 %  | <div><div></div></div> |
| BOLDER INDUSTRIES   | US201-120372025 | 388 642,00   | 10,29 %  | <div><div></div></div> |
| ESENTTIA            | C0222-000000027 | 145 511,00   | 3,85 %   | <div><div></div></div> |
| Total               |                 | 3 778 672,00 | 100.00 % |                        |

## Methodology & References

---

Mass balance reconciliation per **ISCC EU** (System Document 203, chain-of-custody mass-balance method) combined with the **UK RTFO RCF pathway** (Renewable Transport Fuel Obligation Guidance, Part One — Process, and Part Two — Carbon and Sustainability). Feedstock is **ELT — End-of-Life Tyres**, classified as **100 % fossil** end-of-life material under ISCC EU 203 (Recycled Carbon Fuel category, Annex II); the C14 biogenic fraction reported above reflects radiocarbon analysis of representative production samples and is used solely as an integrity cross-check.

Volumetric conversions apply monthly product densities at 15 °C per the operator's product specifications and the densities registered in the platform product\_densities table (migration 0014). For July 2025: **EU-grade 0,7740 kg/L** and **PLUS-grade 0,8710 kg/L**. Materialised view mv\_mass\_balance\_daily applies the LATERAL lookup against the latest effective density per day.

Closure is defined as (EU output + PLUS output) – input at constant product density and rounded to the kilogram. Per ISCC EU practice, monthly deviations below 1 % are accepted without remediation; deviations between 1 % and 3 % are inspected; deviations of 3 % or more trigger a full reconciliation review prior to release of the submission bundle. The closure semaforo on page 2 reflects this tiering.

This Annex A is cryptographically anchored to the cover letter of the submission bundle via the SHA-256 digest reported in the running footer (short prefix –).
