Annex D

Closing Stock Carry-over Declaration

January 2025 · Girardot, Colombia

Submission reference	RTFO-310125
Reporting period	January 2025 (2025-01)
Plant	Girardot, Colombia
Feedstock class	End-of-Life Tyres (ELT) — pyrolysis intermediate
Closure delta (end-of-period)	339 865,000 kg
Regulator	UK Department for Transport — RTFO / LCF Delivery Unit
Generated	2026-05-20T00:00:00Z

Jurisdiction: Canton of Zug — Switzerland

1. Executive summary

The end-of-January 2025 stock balance for the **Girardot, Colombia** feedstock-handling line shows **339 865,000 kg** of carry-over inventory. This quantity is the arithmetic difference between the period's total feedstock intake recorded against `daily_inputs` and the period's total `kg_to_production` recorded against `daily_production`. It explains the closure deviation observed across the January-February 2025 monthly mass-balance reports and is fully reversed in the subsequent reporting period (see §4 below).

2. Source of the data

Primary source: the operator production workbook `Girardot producció`n Enero 2025_KNEG.xlsx, sheet JANUARY2025. Ingested into the DFT backend by `scripts/parse_xlsx.py` on 2026-05-11 (commit 99e4edf). Two DFT tables receive the parsed values:

- `daily_inputs` — one row per supplier delivery (columns A-J of the workbook) tagged with `supplier_id`, certificate reference and eRSV number.
- `daily_production` — one row per production day (columns K, L, M, O of the workbook) tagged with `kg_to_production`, EU/PLUS yields and downstream by-product allocations.

Within the JANUARY2025 sheet, 21 rows exhibit a K-only signature: column A (date label) is blank, column K (`kg_to_production`) carries a negative value, and columns L, M, O (EU yield, PLUS yield, by-product total) are unpopulated. These rows record **physical stock withdrawals** from inventory accumulated in prior reporting periods (intermediate ELT pyrolysate retained at the Girardot facility from CROWN008 batch production in late 2024). They are not new intake and are correctly excluded from the `daily_inputs` ledger by the parser (`_is_aggregate_prod` classifier — see §5 audit-trail anchor).

3. Reconciliation — closure delta math

The 339 865,000 kg closing-stock figure is verifiable by direct query against the DFT production database. The same query reproduces the inverse figure for the immediately subsequent reporting period (February 2025), demonstrating the symmetric carry-over.

Period	Σ total_input_kg	Σ kg_to_production	Closure delta
January 2025 (2025-01)	3 383 177,000	3 043 312,000	+339 865,000
February 2025 (2025-02)	2 648 713,000	2 988 578,000	-339 865,000
Combined Jan + Feb 2025	6 031 890,000	6 031 890,000	0,000

End-of-January 2025 closing stock: **339 865,000 kg** of ELT-derived intermediate, physically segregated at the Girardot, Colombia feedstock bay and consumed in the opening days of the subsequent reporting period.

4. K-only stock-recovery rows — JANUARY2025 sheet

The table below enumerates every K-only row identified by the parser inside JANUARY2025. Row numbers are physical positions in the source workbook. Column K values are reproduced verbatim (negative sign denotes stock withdrawal from prior-period inventory). The accumulating subtotal column shows the cumulative stock-recovery profile of the month.

#	xlsx row	Day label	Column K (kg)	Subtotal (kg)
1	21	02 JANUARY 2025	-34 540,000	-34 540,000
2	29	03 JANUARY 2025	-86 702,000	-121 242,000
3	48	06 JANUARY 2025	-50 690,000	-171 932,000
4	78	08 JANUARY 2025	-17 081,000	-189 013,000
5	94	09 JANUARY 2025	-36 190,000	-225 203,000
6	108	10 JANUARY 2025	-41 407,000	-266 610,000
7	138	13 JANUARY 2025	-139 971,000	-406 581,000
8	194	17 JANUARY 2025	-38 278,000	-444 859,000
9	223	20 JANUARY 2025	-50 536,000	-495 395,000
10	228	21 JANUARY 2025	-20 294,000	-515 689,000
11	229	21 JANUARY 2025	-19 763,000	-535 452,000
12	230	21 JANUARY 2025	-4 374,000	-539 826,000
13	231	21 JANUARY 2025	-3 588,000	-543 414,000
14	232	21 JANUARY 2025	-18 127,000	-561 541,000
15	233	21 JANUARY 2025	-17 347,000	-578 888,000
16	239	21 JANUARY 2025	-50 378,000	-629 266,000
17	267	23 JANUARY 2025	-19 365,000	-648 631,000
18	283	24 JANUARY 2025	-19 854,000	-668 485,000
19	314	27 JANUARY 2025	-35 884,000	-704 369,000
20	328	28 JANUARY 2025	-18 777,000	-723 146,000
21	330	28 JANUARY 2025	-51 617,000	-774 763,000
Total — stock-recovery (negative K)			-774 763,000	

Note on the recovery total vs. closing stock figure: the -774 763,000 kg sum of K-only rows represents stock withdrawals during January 2025 (consumption of prior-period inventory). The 339 865,000 kg closing-stock figure is the net residual at month-end, computed independently as $\Sigma \text{inputs} - \Sigma \text{kg_to_production}$ (see §3 table). The two quantities are not expected to coincide; they represent different points in the period-level mass-balance equation.

5. Audit-trail anchor

Parser fix: 99e4edf (date 2026-05-11). Reclassified K-only rows out of the production aggregate path and into stderr-logged stock anomalies; LAST-WINS resolution applied for duplicate daily aggregates per the chain-of-custody method. Reference: project memory
project_xlsx_aggregate_detail_fix.

Audit-log table: audit_log

Tables instrumented: daily_inputs, daily_production

Entries logged: 30 INSERT / UPDATE / SOFT_DELETE records covering re-ingestion of the corrected JANUARY2025 sheet.

Audit-log id range: 1 - 68

Audit-log timestamp window: 2026-05-08 10:45:51.347392+00 → 2026-05-12 23:03:21.148174+00

6. Methodology & references

Methodology. Closing stock is computed as the arithmetic difference between the period sum of daily_inputs.total_input_kg and the period sum of daily_production.kg_to_production, both filtered on deleted_at IS NULL (the project policy disallows hard deletes; rectifications are applied via the rectified_* column family). Material is physically segregated within the Girardot, Colombia feedstock bay; no commingling with the subsequent period's intake occurs until the stock has been drawn down. This is consistent with the ISCC EU mass-balance method for chain-of-custody accounting (System Document 203, §4) and with the UK Department for Transport — RTFO / LCF Delivery Unit expectation that retained intermediates are reported explicitly rather than implied via closure drift.

This Annex D accompanies submission RTFO-310125 and is to be read with Annex A — Mass Balance Report (January 2025) and the cover letter of the same submission bundle. The closing-stock quantity declared on the previous page reconciles, on a kilogram basis, with the difference between Annex A's reported intake and Annex A's reported production allocation for the same period.

This Annex D is cryptographically anchored to the cover letter of the submission bundle via the SHA-256 digest reported in the running footer (short prefix 739906290a8b). The full digest is published in the side-car file 07_stock_carryover_explanation.pdf.sha256.
